Quick Start Companion Sheet

Section 1: The Core Framework

The Micro Iterative AI Frameworks ensure you are a professional driver, not a passenger. Focus on these four pillars to transform your workflow:

- **Prompt Pre-Purposing:** Build your precision tools before the deadline hits.
- **Expertise Embedding:** Bake your "gold standard" style and judgment into the instructions.
- **Workflow Blueprinting:** Map the fastest path from source text to a finished file.
- **Micro-iteration:** Sharpen your tools with every segment you process.

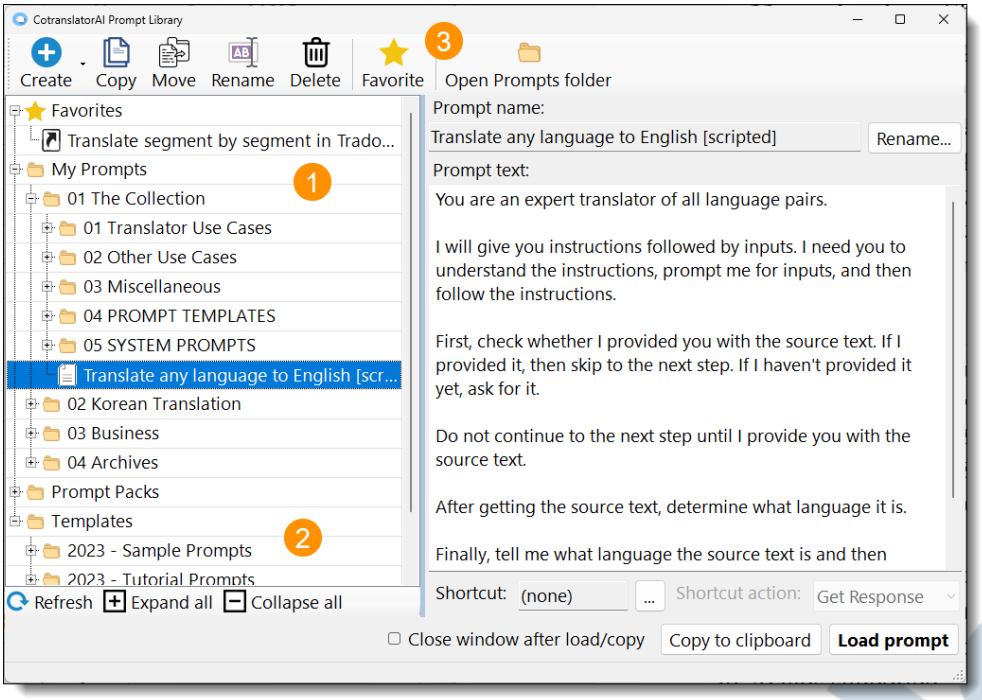

Section 2: The Main Window

1. **Instructions** field: In-place instructions. Stay locked until you change them.
2. **Segment** field: Your active data. Wipes clean after every sent prompt to ensure a fresh slate for the next segment.
   * Together, the **Instructions** and **Segments** fields are referred to as the **Structured Prompt** fields. They separate the “how” from the “what” in your prompts. Clicking the **Send New** button sends your prompt from the **Structured Prompt** fields, starting a new **AI Dialog**.
3. **Ad-hoc Prompt** field: Your follow up. Maintains the context of the current **AI Dialog** for ongoing interactions with the AI model.
4. Tabs row: Independent channels into the AI. Up to 20 tabs supported.

Visit https://CotranslatorAI.com/WhatsNew for links to the latest resources.

Section 3: The Prompt Library

Stop re-typing and start deploying your intellectual property.

1. **My Prompts:** Your proprietary business assets. Store your proven "recipes" here.
2. **Templates:** Pre-installed professional blueprints. (Note: Copy to **My Prompts** to edit).
3. **Favorite** button: Mark a prompt as a **Favorite** to pin it to the **Favorites** list and elsewhere.

Section 4: Accelerators

Eliminate the "Copy-Paste Olympics" and stay in a flow state using these triggers.

- **Quick Run** menu (default: Ctrl + Shift + F10): Your mobile command center. It appears instantly at your cursor in any software (Trados, Word, Browser). Use the top section to send text to CotranslatorAI.
- **Built-in Keyboard Shortcuts**: You can bypass the **Quick Run** menu using keyboard shortcuts. Map your key combinations in **Tools** > **Keyboard Shortcuts** to match where your fingers naturally land.
- **Recent Prompts** list: Hover over the **Prompts** button on the **Dashboard** of the **Main Window** for an automatic history of your recent prompts.
- **Favorite Prompts** list**:** Your favorited "gold standard" prompts also appear in the **Prompts** button hover menu.

Section 5: The Global Hub

Here's how to inject your Prompt Library prompts directly into any chatbot (ChatGPT, Gemini, etc.):

1. Click into the chatbot prompt entry field
2. Hit **Ctrl + Shift + F10** to bring up the **Quick Run** menu.
3. Select **Insert prompt from the Prompt Library**.
4. Select any prompt in your **Prompt Library** and click the **Insert Prompt** button.
